

Ultralightweight Headsets with Boom Microphone

Ultralightweight Headsets are for use with David Clark Company 3100, 3400, 3800 and 4200 Intercom systems. They can also be adapted for use with portable and mobile radios.

They are designed for maximum wearer comfort and feature a low-tension headband assembly with a single earphone, padded in soft foam, which rests lightly on the ear.

A noise canceling microphone providing crisp, clear communication is mounted on a lightweight, flexible boom. The microphone/boom assembly pivots for left or right side positioning.

David Clark Company Ultralightweight Headsets are available for use with our Series 3000 PTT (Push-to-Talk) Radio Adapters for mobile radios, Series 6000 PTT Radio Adapters for mobile and portable radios, and Series 7000 PTT Radio Adapters for portable radios.

Radio Adapters are available for over 350 portable and mobile radios and can be selected from our website at <http://www.davidclark.com/TwoWay/>
