High Visibility Extension Cords

"Day-Glo" Orange Series

Aviation Ground Support

Product Bulletin

Ideal for Airline/Airport Ground Support, Push-Back and Maintenance Operations

Model C31-15DG: 15 ft. (extended) Coil Cord with (6J-1176) Jack and 1/4" Stereo Plug

Model C31-26DG: 26 ft. (extended) Coil Cord with (6J-1176) Jack and 1/4" Stereo Plug

High visibility "Day-Glo" Orange cord is easier to see during day and night operations, and significantly improves safety.

Remote nylon hooks attached at each end relieve tension, increase cord life, and protect aircraft jack plate when connected. Hooks are made of high-strength nylon and will fit all aircraft doorways and connection points on both wide and narrow body aircraft.

Protective rubber boot is designed to slide over communication plug if cord is pulled across pavement.

Headset jack with metal shell replaces plastic shell found on most extension cords and includes protective rubber boot for added durability.

Oil and UV-resistant cable jackets and connector boots, built to withstand the most demanding environments and weather conditions.
