

The 22610G-01 Conversion Kit is designed to convert any traditional David Clark Behind-the-Head (BTH) Headset to operate as a helmet-mounted unit in cutaway Special Operations helmets with compatible accessory rails. It features a detent option, allowing the user to either clamp into position over the ears when communication/noise attenuation is required, or detent outward to relieve clamping pressure when not in active use.

22610G-01 Conversion Kit

Visit us at WWW.DAVIDCLARK.COM to view product details and specific helmet compatibility.
